Grade for assignment	A
Graded on	Tuesday, 15 December 2015, 3:24 PM
Graded by	Muhammad Usman Iftikhar
Feedback comments	**Grading notes:** - Task 8: You were supposed printout birthday years when you must buy boxes. - Task13: Throw an exception if we end input with 'X'. -Task 6: Try such sequence: 10 9 8 7… etc. It won't work correctly and I suggest you to find the error yourself. **Conclusion:** Good job. Although you have a minor mistake, but you have commented your code well. That's why

your grade is A.

Other notes (not affecting your grade):

- Task12: Complex logic, a simple solution would have been without if-else statements. For example, roll = ran.nextInt(6); dice[roll]++;

- Please, format your code according to standards (tabulations, spaces, empty lines, etc.).
